## In the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1 1. (Currently Amended) A water repellent slide fastener, comprising a pair of 2 zipper tapes (25, 26), to which are secured fastening elements (21, 22) 3 which are unfastenable and fastenable through the intermediary of a 4 zipper slide (30), said zipper tapes (25, 26) being water repellent, characterized in that the first and second zipper tapes (25, 26) are 5 secured to the fastening elements (21, 22) asymmetrically relative to 6 7 each other, such that the first one (25) extends, in the form of an 8 extension (25X) crossing a centre line between the tooth elements, over 9 the second zipper tape (26) to overlap a part of the second zipper tape (26), which has its other edge, the far edge relative to the garment, fitted 10 11 with the fastening elements (22), and the zipper tape (25), which has the 12 extension (25X), has the fastening elements secured to the point, from 13 which the extension (25X) commences.
- (Currently Amended) A slide fastener as set forth in claim 1,
   characterized in that the extension (25X) of one zipper tape (25) overlaps
   the other zipper tape (26) over the distance of 1-5 mm, commencing from
   the edge of the zipper tape (26) closer to the fastening elements (22).
- (Currently Amended) A slide fastener as set forth in claim 1 or 2,
   characterized in that said extension (25X) substantially conceals the slide
   fastener's fastening elements (21, 22).
- (Currently Amended) A slide fastener as set forth in claim 1,
   characterized in that the zipper tape (25, 26) has its stiffness adapted to
   be such that the extension (25X) of one zipper tape (25) applies at least a
   small weight against the other zipper tape (26).

1	5.	(Currently Amended) A slide fastener as set forth in any of claims 1-6
2		claim 1, characterized in that a slide fastener (13) is fitted to an article
3		(10), e.g. a garment, a shoe, a bag, or the like, in such a way that the
4		zipper tape <del>(25)</del> has its extension <del>(25X)</del> positioned such that gravity
5		denies the migration of water into possible gaps between the slide
6		fastener's (13) fastening elements (21, 22) and/or into the slide fastener's
7		centre slot.

- 6. (Currently Amended) A zipper slide (30) for use in association with a slide fastener as set forth in claim 1, characterized in that the zipper slide (30) has one (32) of its body members formed with a recess (33X) for the extension (25X) of the zipper tape (25).
- 7. (Currently Amended) A zipper slide (30) as set forth in claim 6,
  characterized in that the recess of the zipper slide (30) has a width of 1-5
  mm and a depth of 0,2-0,8 mm, whereby the extension element (25X) of
  one zipper tape (25) presses against the other zipper tape (26).
